

BECHTEL – AMRUN MOF PILES

## PROJECT OVERVIEW

- Scaffold built for construction of new export facility in remote Far North QLD
- Challenging environmental conditions
- Heritage and Cultral conditions to be understood and adhered to

Scaffolding in remote conditions. The Benchmark Scaffolding team were engaged to provide scaffolding for the construction of a new export facility in remote North Queensland.

The heritage and cultural area we were working in had to be understood, respected and adhered to at all times. The remote settings combined with the challenging environmental conditions allowed our innovative design and engineering team to really showcase their skills.

Having the technology and design features to provide 3D drawings and a comprehensive methodology turned this difficult project into a simple project. Providing our client with a methodology that explained everything in detail gave confidence to everyone involved to get the job done on time, without incident, and under budget.
