

PROJECT OVERVIEW

- Provide access and edge protection for removal of existing bridge decks and installation of new bridge under strict track closure conditions and timelines.

Working within strict timeframes, environmental conditions and budgets is our normal day to day operations. You could call it our bread and butter. It's why our clients have complete confidence in our abilities when we have to supply, build and dismantle scaffolding during track closures and precise timelines. With this project at Merinda Bridge in Bowen, we were engaged to provide access and edge protection for the removal of existing bridge decks and the installation of a new bridge. Using our highly experienced site team we were able to deliver this project safely, on time and hitting every target during the track closures.
